Rooted Grounds Data Analysis

Analysis 1: Total Revenue All Time by Industry

Analysis Lead: Brody Gore

This query takes data from every sale ever recorded in the Rooted Grounds Database. It starts by grouping all customers into their respective industry (i.e. Healthcare, Food Services, Grocery Stores). From there it calculates the total amount of revenue each of those industries have generated for Rooted Grounds going back to the very start of their reported data. We can see that distributors are their number one customer making up \$7.2 million dollars in revenue to date. Using this information we gained valuable insight into which industries are already making up the majority of their revenue. Additionally by understanding the makeup of their overall revenue Rooted Grounds can efficiently allocate resources for marketing and R&D proportionately to different industries according to their overall revenue. While correctly allocating is important this query can be used to highlight which industries Rooted Grounds have opportunities for growth in. If they have a smaller portion of revenue for example in the Entertainment and Coworking Space industries they could consider using these avenues for potential growth of the business. For

example, “The global coworking spaces market size was valued at USD 14.91 billion in 2023 and is projected to grow at a CAGR of 15.7% from 2024 to 2030” (Grand View Research, 2025). The Coworking space industry is rapidly growing and it's just one example of where they could greatly increase their yearly revenue. However with their top industry performers being marginally higher than the rest leaves important insight for the company. It would be a major hit to Rooted Grounds to miss out of revenue from the Distributor and Hotel industries. This means that to keep the company's finances growing year over year they have to closely track these partners to make sure they are supporting them with whatever they need to keep growing. This analysis arms Rooted Grounds with important information to not only protect their current revenue, but make expansions in industries with high potential.

Analysis 2: K-Cup Sales by Month in 2023

Analysis Lead: Zina Dupal

Total K-Cup Quantity by Month in 2023

This query supports our problem statement, "How might Rooted Grounds position itself as the coffee of choice for new parents?" by analyzing purchasing patterns specifically related to K-Cup products. New parents prioritize both convenience and meaningful social impact in their purchases, making single-serve K-Cups a natural product to emphasize (Takemasa, 2024). The query results show a strong, consistent retail demand for K-Cups across 2023, indicating an opportunity for Rooted Grounds to market itself as a convenient, everyday choice for busy parents. In November 2023, Rooted Grounds sold 754 retail K-Cup units, the highest volume recorded. Other strong months included August (706 units), May (627 units), and April (623 units), with similar strength in September (617), February (583), and October (574). Even in traditionally slower periods like March (483), June (480), and December (445), K-Cup sales remained

healthy. These results suggest that K-Cup consumption is not heavily tied to seasonality or promotions but is integrated into customers' regular buying habits. According to Mintel, both mothers and fathers actively seek products that save time while still aligning with their values, such as supporting children's futures (Takemasa, 2024). Rooted Grounds can leverage this by pairing their already-popular K-Cup products with an initiative that donates a portion of proceeds to causes like textbooks, scholarships, or playground refurbishments. This approach combines convenience with a strong emotional appeal, meeting the dual motivations of new parents. The query's output validates that Rooted Grounds already has a successful K-Cup product line among retail customers. With a slight repositioning around social impact and parental values, Rooted Grounds can become the go-to coffee choice for new parents who want fast, quality coffee that also creates meaningful change.

Analysis 3: Most Popular Products in 2023

Analysis Lead: Kendal Preston

This query was designed to display the item name and total units sold for each product in 2023. I specifically chose 2023 because it is the only complete year available in the database, allowing for the most accurate and consistent analysis. The results of the query revealed that the best-selling product was the “K-Cup CASE - Founders Columbian,” with a total of 1,442 units sold. It was followed closely by four additional K-Cup products, indicating a strong customer preference for K-Cups overall at Rooted Ground’s. This finding is significant because it highlights K-Cups as Rooted Ground’s most popular and in-demand product type. This insight directly supports the solution my team has proposed. We are planning to create a new, specialized K-Cup blend targeted toward parents with young children,

specifically those aged 0 to 5 years. Our decision is further reinforced by external research from Statista, which found that 27.8% of new parents reported K-Cups as their most common method of coffee consumption, making it the most popular for our target market. By offering a targeted K-Cup blend, we can tap into an already high-demand product category while tailoring it specifically to the preferences of our target audience. Not only does this strategy align with existing consumer behavior, but it also creates an opportunity to build brand loyalty among new parents by offering them a product that fits seamlessly into their fast-paced lifestyles. Through data-driven insights and targeted product development, we are positioning the company to meet customer needs more effectively and drive future growth.

Analysis 4: What Each Customer Ordered, When & Cost

Analysis Lead: Sara Cohon

The query identifies high-value customer transactions by filtering purchases where the total price exceeds \$300, specifically for transactions occurring after July 1, 2024. I chose to focus on transactions after this date because it ensures that the analysis reflects the most up-to-date purchasing behavior, which is essential for making timely and accurate business decisions. By narrowing the query to include only those transactions over \$300, we are able to reduce the volume of data returned and focus on the key customers responsible for significant sales. This approach not only streamlines the analysis but also highlights the most important transactions that contribute to the revenue. By analyzing this data, Rooted Grounds can gain a deeper understanding of which products are generating the largest transactions and identify which customers are contributing the most to the business. This level of detail is essential for strategic business planning. In addition, the query is structured to display results sorted by price and customer name, making it easier for the client to spot trends in purchasing behavior. For example, by examining the results,

Rooted Grounds can identify which customers consistently make larger purchases, helping the company to segment its customer base more effectively. This segmentation can be used to prioritize engagement efforts toward these high-value customers. Furthermore, understanding which items are most popular and associated with larger transactions provides valuable insights for inventory forecasting. Overall, this analysis empowers Rooted Grounds with a clearer understanding of their high-value customers and the premium products driving revenue. With these insights, the company can make more informed decisions about customer relationship management, product offerings, and overall revenue generation strategies. By focusing on the right customers and products, Rooted Grounds can enhance customer satisfaction, boost sales, and achieve sustainable growth. This aligns with recent findings that “marketers are shifting toward deeper personalization and audience targeting to drive ROI” (Iskief, 2025).

Analysis 5: Quantity of Each K-Cup Flavor Sold

Analysis Lead: John Gregorio

The purpose of my query is to display the quantity of different flavored K-Cups. This shows multiple pieces of data. The first use was to simply determine which flavor sells the most. In this case, Highlander Grogg has the most quantity which can indicate that it sells the most compared to other flavors. Another use for the quantity is to cross reference it with the cost of each. All K-Cups sold by Rooted Grounds sell for \$54. This means that approximately \$117,000 of Highlander Grogg has been moved. I used the data collected and imported it via CSV into Excel. I excluded DECAF K-Cups, only for this example, for the

purpose of my research, because the idea behind our marketing is to energize new parents. Nonetheless, I averaged the quantity of each flavor to 1931 K-Cups. I also used the SUM function to add the entire quantity together. If you multiply the sum of the amounts by the sale price of the K-Cups you get approximately \$556,000. Given the revenue from Rooted Grounds, about a quarter of their revenue came from K-Cups. This data is vital to understanding trends with consumers, specifically about K-cups. This was very helpful when running the potential revenue increase because using the revenue generated I was able to get a rough idea about the number of people buying K-Cups. Using my source and the data I collected, I cross-referenced and found some trends. One of the trends Identified was how “Adults aged 25-69, women, people with higher levels of education, people with higher incomes, urban residents” tend to drink coffee more often (AndreDaniel, 2023). This information plus the favored k-cup flavor helped me understand who the people are and what the market wants.

Analysis 6: Parent Companies Generated Revenue

Analysis Lead: Dominick Smith

Sum of TOTAL_REVENUE by COMPANY_NAME

This query retrieves and orders each parent company by the total amount of revenue generated from the Rooted Grounds database. The revenue generated by each parent company is calculated by multiplying the quantity of items sold by their respective price at the individual invoice detail level. The values are then aggregated using the sum function to determine the total revenue generated from each company. US Foods is by far the most significant contributor, generating \$6,625,481.28. It accounts for a significant majority of the total revenue captured for Rooted Grounds. Additionally, Colombia Sussex follows in second with \$1,876,915.17, making it another considerable contributor to Rooted Grounds' total revenue. It is notable that there is a significant drop-off in total revenue from US Foods and Columbia Sussex,

suggesting that Rooted Grounds may be strongly dependent on selling its products to US Foods. It is also important to note that Dorothy Lane Market and Sysco generate approximately \$450,000 of revenue for Rooted Grounds, making these companies the third and fourth largest customers. After these companies, there is a significant drop-off in revenue generated, with each subsequent company generating less than \$100,000 in revenue. This means that revenue concentration is high; a few companies account for the majority of sales. This poses a client concentration risk, meaning a loss of one major client could significantly impact overall revenue. Rooted Grounds can use this data to strategically guide their future business decisions and efforts by strengthening their relationships with top clients, such as US Foods and Columbia Sussex. Additionally, they could also continue to diversify their client base to reduce the risk of high revenue concentration by increasing the number of products sold to mid-tier consumers, such as Sysco and Dorothy Lane Market. Rooted Grounds should explore opportunities to grow smaller accounts by offering promotions, loyalty programs, or partnership initiatives to increase their purchasing volume. According to Kreischer Miller, “lack of diversification can prevent businesses from pursuing new markets or investments,” which emphasizes the strategic risk of concentrating too much business in just a few hands.
